

INCIDENT RESPONSE REPORT

1. Objective

The objective of this task is to simulate a cybersecurity incident and perform basic incident analysis using sample logs.

2. Incident Summary

A suspicious login activity was detected in the system logs. Multiple failed login attempts were observed followed by a successful login from an unknown IP address. Suspicious PowerShell execution and malware activity were also identified.

3. Log Analysis

The following suspicious activities were detected:

- Multiple failed login attempts for the admin account
- Successful login from unknown IP address
- Encoded PowerShell command execution
- Suspicious malware file detected
- External outbound connection on port 4444

4. Indicators of Compromise (IOCs)

IOC Type: Suspicious IP

Value: 185.243.115.84

IOC Type: External Connection IP

Value: 45.77.21.90

IOC Type: Suspicious File

Value: malware.exe

IOC Type: Encoded Command

Value: powershell.exe -enc

5. Response Actions

Detection:

The security logs indicated abnormal login behavior and suspicious command execution.

Containment:

- Block suspicious IP addresses
- Disconnect infected system from network
- Disable compromised accounts temporarily

Eradication:

- Remove malware file
- Perform antivirus scanning
- Delete malicious scripts

Recovery:

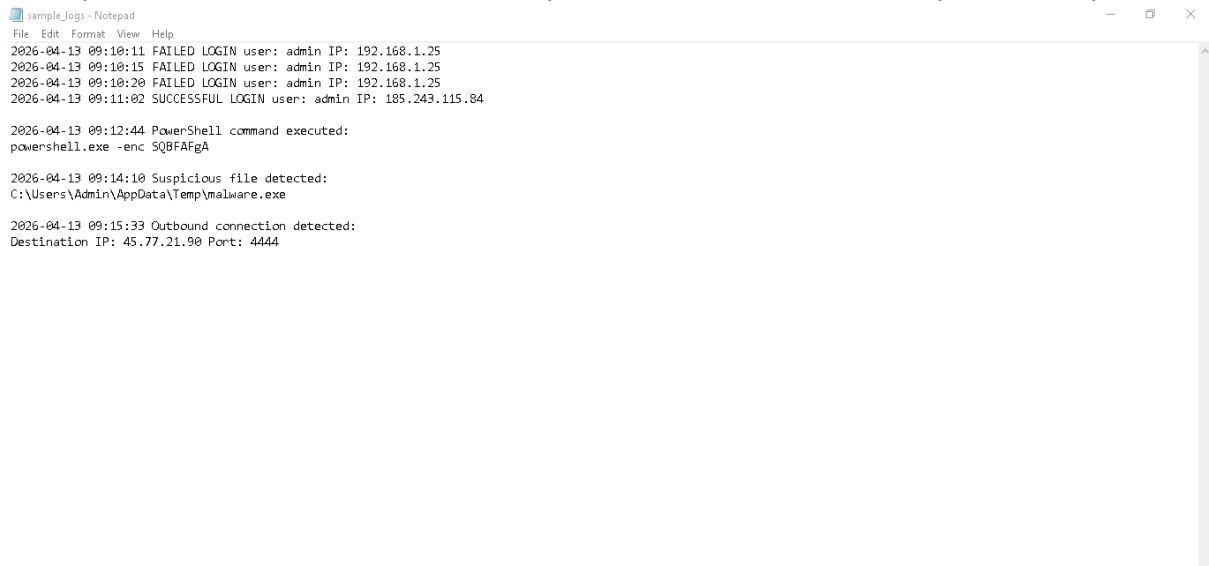

- Reset passwords
- Restore system to safe condition
- Reconnect device after verification

Lessons Learned:

- Enable multi-factor authentication
- Monitor login attempts regularly
- Improve log monitoring and SIEM alerts

6. Conclusion

The incident analysis identified possible brute-force login attempts and suspicious malware-related activity. Immediate containment and recovery actions were recommended to protect the system.

Destination IP: 45.77.21.90 Port: 4444
```

DETECTED ANOMALIES

1. Multiple failed login attempts
2. Successful login from unknown IP address
3. Encoded PowerShell execution
4. Malware file detected in Temp folder
5. Suspicious outbound connection to external IP
